                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNAs equences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with inteact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and
Rapamycin is a macrolide which is structurally related to FK506. This RFKBP has been isolated from bovine thymus (bRFKBP) and was found to be of low molecular weight, approx. 16,000, and to have cis-trans prolyl isomerase activity. The N terminal of bRFKBP has been shown to have over 50% homology to the N terminal of FKBP12. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        diagnostic, forensic, gene therapy and chromosome mapping procedures

The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABR36404-ABZ36911) encoding polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the
                                                                                                                                                                                                  New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of the toxicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cytostatic; antiinflammatory; nootropic; neuroprotective; cardiant; gastrointestinal; gene therapy; GENSET; heavy metal toxicity; cancer; inflammatory disease; immune disorder; neuromuscular; toxicity; central nervous system; cardiovascular; gastrointestinal.

                              The present invention relates to novel GENSET polynucleotides (AB2356404-AB23691) encoding polypeptides (ABP75963-ABB76368). The polynucleotides and polynucleotides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the

The invention relates to human diagnostic and therapeutic (dithp)

CD polynucleotides and their associated polypeptides (DITHP polypeptides).

CTHE sequences of the invention are used in the treatment and diagnosis of cell proliferative disorders (e.g. atherosclerosis, cirrhosis), cancers (e.g. tumours of the adrenal gland, bone, bone marrow, brain, breast, cervix, kidney, lung, ovary, pancreas, prostate, skin, spleen, testis or thymus), autoimmune/inflammatory disorders (e.g. asthma, bronchitis, corrisis, osteoporosis), viral infections, bacterial infections, fungal infections, parasitic infections, developmental disorders (e.g. anaemia, cepliepsy), selarure disorders (e.g. cerebral palsy, splina bifida), cendering disorders (e.g. thrombosis, aneurysm), metabolic disorders (e.g. thrombosis, aneurysm), metabolic disorders (c.g. ulcerative colitis, lysinuria) and transport disorders (e.g. ulcerative colitis, lysinuria) and transport disorders (e.g. myotronic dystrophy, catatonia, peripheral neuropathy). Sequences (e.g. myotronic dystrophy, catatonia, peripheral neuropathy). Sequences (e.g. myotronic dystrophy, catatonia, peripheral neuropathy).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                               (without alignments)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Biliverdin-IX alpha reductase and biliverdin-IX beta reductase from human liver. Purification and characterization.";
J. Biol. Chem. 269:24343-24348(1994).
-!- FUNCTION: CONVERTS BILIVERDIN TO BILIRUBIN.
-!- CATALYPIC ACTIVITY: Bilirubin + NaD(P)(+) = biliverdin + NaD(P)H.
-!- COFACTOR: BINDS ONE ZINC ION. HAS DUAL PH/COFACTOR (NADH, NADPH)
SPECIFICITY: USES NADH AT THE ACIDIC PH RANGE (6-6.7) AND NADPH AT THE ALKALINE RANGE (8:5-8.7).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

CAK activates the cyclin-associated kinases CDC2/CDK1, CDK2, CDK4 and CDK6 by threonine phosphorylation. CAK complexed to the core-TFIIH basal transcription factor activates RNA polymerase II by serine phosphorylation of the repetitive carboxyl-terminus domain (CTD) of its large subunit (POLR2A), allowing its escape from the promoter and elongation of the transcripts. Involved in cell cycle control and in RNA transcription by RNA polymerase II. Its expression and activity are constant throughout the cell cycle (By

MI204, a novel 2',5' oligoadenylate synthetase with a ubiquitin-like
extension, is induced during maturation of murine dendritic cells.";

In Timmunol. 163.760-765(1999)

TI Immunol. 163.760-765(1999)

TI Immunol. 163.760-765(1999)

TI FUNCTION: MAY PLAY ROLE IN MEDIATING RESISTANCE TO VIRUS

INFECTION, CONTROL OF CELL GROWTH, DIFFERENTIATION, AND APOPTOSIS.

TO ATALYTIC ACTIVITY: Binds double-stranded RNAs and polymerizes ATP
INC PPPRAZ'P5'A)N oligomers, which activate the latent RNAse L

THAT, When activated, cleaves single-stranded RNAs.

THE TISSUE SPECIFICITY: STRONGLY EXPRESSED IN SPLEEN BENDITIC CELLS,

WHEREAS, IN BONE MARROW-DERYED DERNEITIC CELLS, THE AMOUNT
INCREASES DURING THE MATURATION PROCESS. EXPRESSED IN MANY ORGANS,

THE HIGHEST LEVELS BEING IN TYMUS, LUNG, AND BONE MARROW.

THE HIGHEST LEVELS BEING IN TYMUS, LUNG, AND BONE MARROW.

THE SIMILARITY: BELONGS TO THE 2-5A SYMTHETASE FAMILY.

TO SIMILARITY: BELONGS TO THE 2-5A SYMTHETASE FAMILY.

TO SIMILARITY: CONTAINS I UDIQUITIN-like domain.

THIS MAY NOT BE THE TRUE ORTHOLOG OF HUMAN OASL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-0CT-2001 (Rel. 40, Last sequence update)

Aminopeptidase, chloroplast precursor (EC 3.4.11.1) (Leucine aminopeptidase) (LAP) (Leucy1 aminopeptidase) (Proly1 aminopeptidase)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- CATALYTIC ACTIVITY: Release of an N-terminal amino acid, Xaa-|-Xbb-, in which Xaa is preferably Leu, but may be other amino acids including Pro although not Arg or Lys, and Xbb may be Pro.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COFACTOR: Binds 2 zinc ions per subunit (By similarity).
SUBUNIT: Homohexamer (Probable).
SUBCELLULAR LOCATION: Chloroplast (By similarity).
TISSUE SPECIFICITY: IN TUBERS AND FLORAL BUDS OF UNTREATED PLANTS.
AFTER ABA TREATMENT OF MECHANICAL WOUNDING IS MOSTLY ACCUMULATED IN LEAVES, TO A LESSER EXTENT IN STEMS, BUT NOT IN ROOTS.
INDUCTION: BY ABSCISIC ACID (ABA), JASMONIC ACID (JA) AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ø
                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hildmann T., Ebbeth M., Pena-Cortes H., Sanchez-Serrano J.J., Willmitzer L., Prat S.; "General roles of abscisic and jasmonic acids in gene activation as result of mechanical wounding."; Plant Cell 4:1157-1170(1992).

DISEAGE: DEFECTS IN PREDC ARE THE CAUSE OF SEVERE COMBINED IMMUNE
DEFICIENCY (SCID) WHICH IS CHARACTERIZED BY A LACK OF MATURE
FUNCTIONAL LYMPHOCYTES AND A HIGH SUSCEPTIBILITY TO LETHAL
OPPORTUNISTIC INFECTIONS IF NOT CHRONICALLY TREATED MITH
ANTIBIOTICS. THE LACK OF B. AND T. CELL IMMUNITY RESSEMBLES SEVERE
COMBINED IMMUNOBERICIENCY (SCID) SYNDROME IN HUMAN INFANTS.
SIMILARITY: BELONGS TO THE P13/P14-KINASES FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY).

                                                                  yeast invertase which, when recombinantly expressed in a plant, can modulate invertase which, when recombinantly expressed in a plant, can modulate invertase activity and increase yield in the plant. Chimeric invertase inhibitors are useful for modulating invertase activity and increasing yield in a plant (especially crop species) when used to and protecting plants against the harmful/detrimental effects of stress and adverse environmental conditions. Yeast invertase is less sensitive to invertase inhibitors therefore is an attractive option to supplement invertase inhibitor nucleic acids may be used in their antisense form. The present sequence represents a grape invertase inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or

The present sequence is the protein sequence of a human haematological malignancy related antigen. The methods of the present invention comprise detecting the presence of haematological malignancy related antigen(s) in
                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating. activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Compositions and methods for the detection of hematological malignancies, e.g. chronic lymphocytic leukemia, lymphoma, follicular lymphoma and Hodgkin's and T/B cell non-Hodgkin's lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                               0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to compositions and methods for the detection, diagnosis and therapy of haematological malignancies. The present sequence is the protein sequence of a human haematological malignancy related antigen. The methods of the present invention comprise detecting the presence of haematological malignancy related antigen(s) in a sample obtained from the patient (an increased level of the polypeptide, compared to an unaffected individual, is indicative of an increased risk). Haematological malignancies which can be treated using
a sample obtained from the patient (an increased level of the polypeptide, compared to an unaffected individual, is indicative of an increased risk). Haematological malignancies which can be treated using the present invention are chronic lymphocytic leukaemia, lymphoma, follicular lymphoma, Hodgkin's lymphoma, non-Hodgkin's lymphoma and T/B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Compositions and methods for the detection of hematological malignancies, e.g. chronic lymphocytic leukemia, lymphoma, follicular lymphoma and Hodgkin's and T/B cell non-Hodgkin's lymphoma

The present sequence is the protein sequence of a human haematological malignancy related antigen. The methods of the present invention comprise detecting the presence of haematological malignancy related antigen(s) in polypeptide, compared to an unaffected individual, is indicative of an increased risk). Haematological malignancies which can be treated using increased risk). Haematological malignancies which can be treated using follicular lymphoma, Hodgkin's lymphoma, non-Hodgkin's lymphoma and T/B
the present invention are chronic lymphocytic leukaemia, lymphoma, follicular lymphoma, Hodgkin's lymphoma, non-Hodgkin's lymphoma and \text{T/B} cell non-Hodgkin's lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Compositions and methods for the detection of hematological malignancies, e.g. chronic lymphocytic leukemia, lymphoma, follicular lymphoma and Hodgkin's and T/B cell non-Hodgkin's lymphoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens. The colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene diagnosis and treatment of diseases associated with inappropriate perpension. For example, N and P may be used in the prevention, associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. By inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus progenes), comprising one of 548 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN7126 and activity of (I) in ucleic acids encoding (I), ABN66044-ABN7126 and streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. The treatment or prevention of infection or disease caused by Streptococcus ample. (I) is used to detect Streptococcus in a belongical sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to recombinantly produce (I) and may be coloured in gene therapy. Antibodies to (I) are used for affinity cused in gene therapy. Antibodies to (I) are used for affinity contraction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                    Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -

The invention relates to isolated polynucleotide (I) and probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The cand gene therapy techniques control to the control of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 293;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Staphylococcus aureus cellular proliferation protein #388.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 22; DB 22; Length 29;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to six larva-specific adhesion/metamorphosis-related genes from the barnacle Balanus amphitrite (CDMAS given in AAA97601-A97606) and to the proteins they encode (AAB23267-B23272). The genes and the proteins can be used for screening for a substance that inhibits the adhesion or metamorphosis of barnacle larvae, which may be useful in antifouling compositions for use in the shipping industry. The present sequence represents the Balanus amphitrite adhesion/metamorphosis-related protein Bcs-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel barnacle kipris larva-specific adhesion/metamorphosis-related gene useful for identifying inhibitors of barnacle adhesion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella con encompaniae, Pseudomonasa aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery compounds nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Con the printed specification, but was obtained in electronic control of form and directly from AIPO at the print of form part control of the print of th
                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotides for the identification and development of antibiotics, comprise sequences of antisense nucleic acids -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to dentify proteins used in proliferation, to express these proteins. The proteins antibodies capable of binding to the expressed proteins. The protein antibodies capable of binding to the expressed proteins. The proteins uncleic acid sequence is also useful to screen for homologous nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

This invention relates to 59 human secreted proteins and the nucleotide sequences encoding them. Sequences AAC59788-C59846 and AAB34687-B34745 represent the proteins and their encoding nucleotide sequences, and control of sequences AAC59847-C59596. The sequences AAC59471 represent fragments of the proteins. Probess CC for the DNA sequences AAC59847-C59596. The proteins exhibit neuroprotective dermatological; immunosuppressive, antinflammatory, antiannemic, noctropic, artiparkinsonlan, cc elebroprotective, heamostatic, vulnerary, cytostatic, antipsoriatic, antibocterial, virucide, and fungicide activity. The proteins and in research. The proteins are useful as nutritional sources or supplements and in research. The proteins are useful as nutritional sources or supplements and in research. The proteins are useful as mutritional sources or supplements and disorders, which may be genetic or resulting from infections.

CC uncleotide sequences such as multiple sclerosis, systemic lupus crythmatosus, rheumatoid arthritis, and for treating maneloid or lupus crythmatosus, rheumatoid arthritis, and for treating macloid or lupus crythmatosus, rheumatoid arthritis, and for treating macloid or lupus crythmatosus, rheumatoid arthritis, and for treatment of central and ulcers. Other uses include in the treatment of central and crytheral narvous system and neuropathies such as Alzheimer's and crimmatic disorders, such as spinal cord disorders, head trauma and craning crimmatic disorders, such as spinal cord disorders, head trauma and creating coagulation of corkilling, infectious agents such as bacteria, infection or function of or killing, infectious agents such as bacteria, crimpled or criminal and other parasites, for effecting bodily characteristics crime as a sequences with an expendism, cathody and criminal minerals, coffecting bodaly and gest or effecting bodaly criminals, minerals, coffecting bodaly criminals, coffecting bohavioural characteristics, providing analgesic effects and for treating companients and contracep
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel proteins and polypeptides useful for the treatment of e.g multiple sclerosis, systemic lupus erythmatosus, rheumatoid arthritis, cancer, Alzhelmer's disease, Parkinson's disease, stroke, anemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 22; DB 21; Length 361;

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving consistence normal activity of (II) or to treat disease states involving antitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in teaponsible for genetic disorders or other traits to assess blodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 384;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome. The polymerase chain reaction (PCR) primers, oligomers, and for chromosome. The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human and and content of sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide provided in the specification.
                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
